

DPP-Session-13

Question 1:

You have the following dataset:

Product	Sales
Product A	150
Product B	300
Product C	450

Write a formula to calculate the total sales of Product B and Product C only.

Ans -> The formula to calculate total sales of Product B and Product C can be written as either

=SUM(B3+B4)

OR

=SUMIF(A2:A4,"Product C",B2:B4) + SUMIF(A2:A4,"Product B",B2:B4)

Question 2:

What formula would you use to count the number of cells that contain numeric values in the range A1:A10?

Ans -> To count the numbers in cells A1 through A10, we would use

=COUNT(A1:A10)

Question 3:

Using the data below, write a formula to find the average score of students who scored above 80:

Student	Score
Alice	85
Bob	75
Charlie	90

Ans-> Formula to find the average score of students who scored above 80 can be written as

=AVERAGEIF(H3:H5,">80")

Question 4:

How would you sort the following dataset first by "Department" (A-Z) and then by "Salary" (Largest to Smallest)?

Employee	Dept	Salary
Alice	HR	5000
Bob	IT	8000
Charlie	HR	4500

Ans-> This can be attained by applying filters and following below steps :

1. Once the filter is applied on table click on the Dept column header and select A-Z(Ascending order) sorting option.
2. Click on the Salary column header and select largest to Smallest (Descending order) option.

Question 5:

Using the dataset below, find the formula to calculate the second smallest value in the "Revenue" column:

Product	Revenue
Product A	1500
Product B	1200
Product C	1800

Ans -> The formula to calculate second smallest value in "Revenue" column would be written as
`=SMALL(B35:B37,2)`

Question 6:

What formula would you use to count the number of employees in the "Sales" department from the dataset below?

Employee	Dept
Alice	IT
Bob	Sales
Charlie	Sales

Ans -> To count the number of employees in the "Sales" department from the dataset above below formula should be used :

`=COUNTIF(B41:B43,"Sales")`

Question 7:

Write a formula to calculate the total sales only for items that sold more than 200 units:

Item	Units Sold
Item A	150
Item B	300
Item C	250

Ans -> To calculate the total sales only for items that sold more than 200 units would be written as

=SUMIF(G41:G43,">200")

Question 8:

Using the dataset below, write a formula to find the maximum price of items that are marked as "Available":

Item	Price	Availability
Item A	200	Available
Item B	150	Unavailable
Item C	250	Available

Ans-> To find the maximum price of items that are marked as "Available" below formula can be written

=MAXIFS(F15:F17,G15:G17,"Available")

Question 9:

Given the following data, what formula would you use to filter and count all employees earning above 5000 in the "HR" department?

Employee	Dept	Salary
Alice	HR	4000
Bob	HR	5500
Charlie	IT	6000

Ans-> To count all employees earning above 5000 in the "HR" department below formula can be used.

=COUNTIFS(B21:B23,"HR",C21:C23,">5000")

Question 10:

Using the data below, write a formula to calculate the average sales of items priced above 100 but less than 300:

Item	Price	Sales
Item A	90	1000
Item B	150	1200
Item C	250	1500

Ans-> To calculate the average sales of items priced above 100 but less than 300 below formula can be used :

=AVERAGEIFS(C27:C29,B27:B29,">100",B27:B29,"<300")
